

Shenzhen Skypark

A fusion of infrastructure, architecture and urban landscape

Skypark revalues a former unused rooftop of an infrastructure building, converting it into a recreational urban strip, with the Shenzhen skyline as a backdrop.

The intention of the project was to integrate the building better into the fabric of its surroundings, whilst rethinking the function of urban design in the 21st century.

As a way of giving back to the neighborhood, the park connects to adjacent buildings via sky bridges, leading in students and sports enthusiasts on a platform designed for them - bringing educational institutions together with the local community in a unique combination of sports and recreational offers tied together with the landscape.
