

Location of the Site near the fishermen village of Yoyo in Mouanko

Creation of Waterfalls

The site is filled in its center with an aquatic basin on which a number of activities of valorization are developed while protecting it. Thus we have created, thanks to spillways, mini waterfalls that will give the impression of the existence of a waterfall and thanks to the noise generated that will make the site alive and will give a dynamic sensory experience to the visitor.

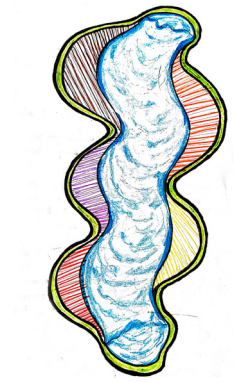

Seen on the small waterfalls reminding of the natural spaces of our countryside

View of the wooden walkway connecting the spaces of the complex and ensuring the continuity of the tourist experience
