

The Larma apartment project is designed in 6 floors and 12 units. This project is located in the north of Iran. Due to the climatic conditions of north of Iran (Mazandaran), rainfall in winter and autumn and the architectural form of the building, we used a gable roof, which is a model of old and native architecture. The architecture of this building is inspired by Iranian architecture and local architecture of Mazandaran. Using bricks, that is a symbol of Iranian architecture and local materials, is one of the main ideas of this project. North of Iran, a green region with dense forests, where extensive constructions is causing deforestation. To respect the environment, we used shrubs and green plants in the facade, that symbolizes the forests of Mazandaran.
