

Dr Az dentistry

Aristotle believes that time cannot be equated with motion, because there are many motions in the world, while time is one. But one can clearly see the close connection between motion and time. Movement occurs in time, and if we do not understand movement, we will not understand time either, so movement can be considered as an indicator of feeling time. Most of us have a laid-back attitude when it comes to waiting in the doctor's office. How can this importance be noted and reminded? And how can this passage of time and waste of life be shown? These two questions came to our minds as the main challenge of the project and the formation of its initial ideas. According to Aristotle's theory, we could use the close relationship between motion and time; A movement that represents the transition of moments and the movement of the sun ...

The total space was divided into two zones of waiting space and space for medical services, waiting space according to the topics mentioned in the idea section; Based on the dualism of the presence of light (shadow motion) and a pure background without frills, it was designed and planned to understand this motion. This duality has also occurred in the material dimension (combination of wood and white plaster).
