

Abshar project/Residential

Our approach in this project was formed based on the location of the project. The current view is in the vicinity of Zayandeh Road Park. In order to blend for the best usage of north sunlight and view of the site, we used wide windows.

The use of vegetation in the facade in the form of trees and in other spaces, including the green roof, even in the entrance and lobby in the form of a green wall, is very effective in regulating the temperature of the building.

In this project, a brick pattern combined with light is used for the identity of a part located on the west side of the building. This component is used in the form of a birth certificate in the courtyard in the form of a combination of brick and wood.
