- 16 discovery land

**420,000** m<sup>2</sup> Wetland Habitat Restoration  
 Protecting **50+** Species of Migratory and Local Birds  
 Including **8** Endangered and **11** Grade-I Conservation Species

As one of **the most urbanized and crowded areas in China**, the Great Bay Area is facing an **increasing loss of natural waterbird habitats**. therefore, interpreting a **new way of wetlands restoration** is imperative to reduce the impact of human activities.

Waterbird Preservation in the Most Urbanized Area

Birds Activities Impacted by Current Urbanization
