There are beautiful houses in the dreams of all people, and we helped the employer to achieve this goal and decided to name the house **Dream House**. Dream house, with an area of 600 square meters in 4 floors: ground floor (lobby and parking), first to second floors (a three-bedroom duplex unit) and third floor (guest suite) in a basement with an area of 260 square meters, with the type of structure and the facilities (Kobax, chiller and powerhouse) located in the city of Isfahan were built.

This building was designed in the southern region of Isfahan for one of the Isfahan carpet merchants who also had an artistic taste. Therefore, our effort was aimed at designing a building that, along with efficiency, would depict the experience of modern architecture in a special way. A clear example of this style can be seen in the use of brick material. Considering the hot and dry geographical climate of Isfahan, a brick shell was designed to prevent heat from entering in a dry form.

With the ingenuity in the arrangement of the bricks, net holes were created in the walls, which will prevent the direct sunlight, we will see the movement of light inside the building at different times of the day. In the southern part, we were able to provide the unity of the space and because the building received light only from the south front, we directed more light into the building by creating long windows. To choose the material in the interior design with the idea of nature, we chose the combination of stone and wood to balance the warmth and coldness of the space.
