

G2 PLAYGROUND DESIGN

The city of Tehran is divided into 22 districts, and District 22 is the most recent development in the northwestern part of the city. Chitgar Residential Complex is one of the largest residential developments in District 22 and also in the entire city. The complex is populated with upper-middle-class young families who wanted to live in Tehran, but desired a different quality of life than the crowded and polluted city center. The playground is surrounded by three residential towers, each consisting of 400 apartment units and standing 30 stories high. This 2000-square-meter piece of land is dedicated to a space that fosters and facilitates social interactions and relationships among the residents.

The land was located in a site with significant variations in height and slope. To optimize the views, we decided to terrace the land, allowing for favorable perspectives both from the outside to the inside of the area and from inside the area, providing views of different parts of the site. The designed elements play a crucial role in creating new sensory and movement experiences for children. Additionally, they are utilized as lighting tools during nighttime. Narvan aimed to create a flexible and multifunctional space that would promote physical activity among children, particularly through group games. G2 Playground is an initiative aimed at fostering a socially sustainable society that promotes various values such as integration, resilience, solidarity, and more. Therefore, we consider G2 Playground as Narvan's contribution to social justice and the equitable distribution of urban benefits.
